Rear Panel

Connect Yamaha digital mixing consoles or DME processors to remote head amps or AD/DA converters via EtherSound for analog interfacing wherever needed.

- Transfer up to 48 channels of digital audio between console and stage or any other location via a single CAT5e Ethernet cable at sampling rates up to 96 kHz.
- Eliminates noise problems that are unavoidable with conventional analog gear and multi-cable type setups, and dramatically reduces analog cable length for superior sound quality.
- 48 AES/EBU inputs and 48 AES/EBU outputs are provided via 25-pin D-sub connectors.
- Designed with Yamaha professional sound gear in mind: minimum setup hassle, trouble-free operation.
- An external power supply can be used in addition to the internal power supply for redundant failsafe operation.
- Use standard Ethernet hubs and routers to create any network configuration you need.
